

**GREYWATER DIVERSION DEVICES  
REGISTER – PLUMBING SAFETY LICENCES**

(Greywater diversion devices are not accredited by NSW Health and this register is maintained only to assist consumers)

---

There are two types of greywater diversion devices (GDD):

- **Gravity diversion device**

A gravity diversion device incorporates a hand activated valve, switch or tap and is fitted to the outlet of the waste pipe of the plumbing fixture such as a laundry tub. Greywater is diverted directly to a sub-surface irrigation system in the garden. Approval to operate a gravity diversion device and the sub-surface irrigation system must be obtained from the local council.

- **Pump diversion device**

A pump diversion device incorporates a surge tank to cope with sudden influxes of greywater for distribution of the greywater directly to a sub-surface irrigation system in the garden. The surge tank does not operate as a storage tank. Approval to operate a pump diversion device and the sub-surface irrigation system must be obtained from the local council.

**Certification of greywater diversion devices**

Greywater diversion devices are evaluated to the Australian Technical Specification ATS 5200.460-2004 by SAI Global Assurance Services. Certification to the technical specification for plumbing and drainage products is obtained by way of a WaterMark licence.
